

Francois Gerber

Software Engineer — Data Pipelines & LLM Crawling

ABOUT ME

I build systems that turn the open web into data a business can act on.

LLM-powered crawling inside Palantir Foundry, at up to 5,000 company websites a day.

Dynamic scraping platforms in Python before that, and eight years of .NET full-stack delivery.

I own the pipeline end to end: extraction quality, reliability at volume, and the data model the business consumes.

EDUCATION

Tertiary: MCSD

2013 – 2015

WW.IT-IQ Training & Solutions — Advanced International Business Systems & Web Development qualification, including the following international certifications:

- MCSD — Microsoft® Certified Solutions Developer — Web Applications (HTML5, ASP.NET MVC, Azure)
- MCSD — Microsoft® Certified Solutions Developer — App Builder
- Microsoft® Certified SQL Specialist
- Microsoft® Certified Professional
- Microsoft Certified Technology Associate — Networking Fundamentals
- Microsoft Certified Technology Specialist — Accessing Data
- Microsoft Certified Specialist — C# & HTML5, CSS3 & JavaScript

High School: Matric (Grade 12)

2008 – 2012

High School Lydenburg. Subjects include English (2nd language), Afrikaans (home language), Mathematics, Hospitality Studies, Business Studies and Accounting.

WORK EXPERIENCE

Ringier South Africa — Senior .NET Full Stack Developer

2022 – Present

Owner of the crawling and processing platform behind Ringier's marketplaces data: user-configurable pipelines that scrape, process and distribute market intelligence in near real time across multiple countries and clients.

Since 2026, building the LLM-powered crawling system inside Palantir Foundry — identification, extraction and pagination at up to 5,000 company websites a day, on Pipelines, Datasets and Workshop applications. Python, C#, AWS, Scrapy, Playwright, Vue, React.

BlueMonday PTY (LTD) — Software Developer

2015 – 2022

Delivered business solutions for clients and internal tools across the .NET stack (ASP.NET, .NET Core, Web API, WCF, Blazor) with Angular, Ionic and Node.js on the front end, running on Azure. Worked end to end, including integrations with on-site industrial hardware.

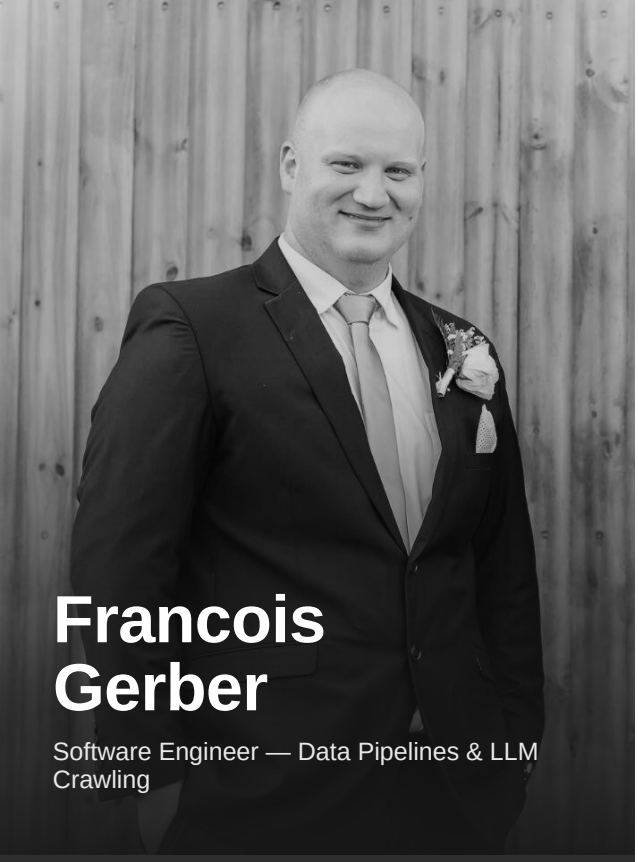

WW.IT-IQ — Student Developer

2013 – 2015

Built programs for coursework, personal projects and client-commissioned work while completing the MCSD qualification.

SKILLS

.NET	Python	Go (GoLang)	SQL
C#	TypeScript	JavaScript	Blazor
ASP.NET	Angular	Vue	React
Node.js	MongoDB	ElasticSearch	Redis
Palantir Foundry	LLM Extraction	Scrapy	Playwright
AWS	Azure	Docker	CI/CD
Linux	Distributed Systems	Architecture	Web Scraping

ENTERPRISE SOLUTIONS

Hades/Olympus

Full-Stack Senior Developer

1 Year (2026)

An LLM-powered web crawling solution that scrapes and extracts job listings from company websites for our clients. The LLM handles identification, extraction and pagination tasks; the multi-country, multi-client system processes up to 5,000 websites daily. Built entirely in Python on Palantir Foundry — Pipelines, Datasets and Workshop applications.

Artemis/Apollo Web Crawling and Processing

Full-Stack Senior .NET Developer

4 Years (2025)

Development and maintenance of the systems inside the Meta Team: applications that dynamically set up web crawlers, scrape websites and use user-generated pipelines to process and distribute data to stakeholders in near real time. The data was used across the Marketplaces landscape of every business in Ringier AG.

(iRIS) Refinery Integration Suite

Software Developer

3 Years (2022)

Modernisation of the legacy applications at the Precious Metals Refinery into one platform built on modern web technology, a relational data model and a microservice architecture. iRIS covers every aspect of the refinery process, integrates with the marketing team in England and with on-site hardware — scales, scanners, label printers, PLCs and engravers.

Operational Intelligence Suite

Software Developer

2 Years (2019)

Real-time monitoring of environmental and occupational-hygiene sensors, released to 12 sites in a year. Mines configure the app themselves; integrations include OSIsoft PI Historian, Wonderware, ETL feeds from manual Excel data and a custom email listener. The project received the 2018 Health and Safety Software Award in the mining industry.

Visual Business

Software Developer

2 Years (2019)

Enterprise architects capture KPIs and their metadata, build relationship trees and implement them at clients; the data feeds Power BI reports that refresh automatically as client metadata changes.

Offline Capture

Software Developer

1 Month (2016)

Remote capture of questionnaires without an internet connection, uploaded to the server once connectivity returns. Built with Apache Cordova, JavaScript and AngularJS.
